plaintext

- https://www.dokuwiki.org/plugin:plaintext

<text>

Similar to **<nowiki>text</nowiki>**, but linebreaks are preserved (replaced by <br/> in the output, but head and tail linebreaks are trimmmed)

```
<text>
(Line 1) This is a **long** //long// __long__ long long long long long long
long long long long long long long long long long long long sentence.
(Line 2) This is a **long** //long// __long__ long long long long long long
long long long long long long long long long long long long sentence.

(Line 4) This is a **long** //long// __long__ long long long long long long
long long long long long long long long long long long long sentence.
</text>
```

<TEXT>

Adds a box like **<code>**, but long text is auto wrapped.

```
<TEXT>
(Line 1) This is a **long** //long// __long__ long long long long long long
long long long long long long long long long long long long sentence.
(Line 2) This is a **long** //long// __long__ long long long long long long
long long long long long long long long long long long long sentence.

(Line 4) This is a **long** //long// __long__ long long long long long long
long long long long long long long long long long long long sentence.
</TEXT>
```

<code> <file>

This plugin adds a “plaintext” style for wrapped text, so you can use it in **<code>** or **<file>** box.

```
<file plaintext>
(Line 1) This is a **long** //long// __long__ long long long long long long
long long long long long long long long long long long long sentence.
(Line 2) This is a **long** //long// __long__ long long long long long long
long long long long long long long long long long long long sentence.

(Line 4) This is a **long** //long// __long__ long long long long long long
long long long long long long long long long long long long sentence.
</file>
```
