

Simulations numériques de marches aléatoires : programmes en Python

Pour une bonne compréhension, ces programmes doivent être étudiés successivement. Il est important d'exécuter le code Python et même de tester des petites modifications.

Génération de nombres aléatoires

01_random.py

```
#!/usr/bin/python
# -*- coding: utf-8 -*-
"""
cf. documentation cf http://docs.python.org/library/random.html
random number generation - génération de nombres aléatoires
functions of interest : choice, randint, seed
"""

from random import *

facepiece = ['pile', 'face']
valeurpiece = [0.01, 0.02, 0.05, 0.1, 0.2, 0.5, 1., 2.]

for i in range(1):
    # choice : random choice of an element from a list
    print(choice(facepiece), choice(valeurpiece))
    # randint : return a random integer number between 2 values
    (including limits)
    print(randint(0,10)) # imprime un nombre aléatoire entre 0 et
10
    print(choice(range(0,11,1))) # same function, using choice and
range to create the list

# seed(ANY_DATA) : seeding of the random number generator with any
(constant) data
# in order to generate reproducible random sequences.
# seed() - without data - uses internal clock value to "randomly"
initiate the generator !

for j in range(3):
    #seed('ma chaîne personnelle') # reproducible initialization
    seed() # to randomly initiate the generator
```

```
for i in range(10):
    print(randint(1000,9999))
print(" ")
```

Histogrammes de nombres aléatoires

02_random_histogram.py

```
#!/usr/bin/env python
# -*- coding: utf-8 -*-

from random import *      # cf. documentation cf
http://docs.python.org/library/random.html
import numpy as np
import matplotlib.pyplot as plt      #
http://matplotlib.sourceforge.net/api/pyplot_api.html#module-matplotlib
.pyplot
import matplotlib.mlab as mlab      #
http://matplotlib.sourceforge.net/api/mlab_api.html#module-matplotlib.m
lab

#seed('ma chaîne personnelle') # reproducible initialization
seed()

rval = []
for j in range(100000):
    rval.append(randint(0,99)) # append to the list a random
(integer) number between 0 and 99

# print rval # uncomment just to see the list of random numbers

# analysis - histogram - see
http://matplotlib.sourceforge.net/examples/api/histogram_demo.html
# http://fr.wikipedia.org/wiki/Histogramme
xh = np.array(rval) # see http://www.scipy.org/Cookbook/BuildingArrays
transforme une liste en un tableau numérique de Numpy
# print(xh)

fig = plt.figure()
ax = fig.add_subplot(111)

n, bins, patches = ax.hist(xh, 50, facecolor='green', alpha=0.75)
print(n) # les nombres d'occurences par classe
print(bins) # les classes, de largeur identique

# modifier le nombre de nombres générés, les nombres de classes-bins,
```

```
plt.show()
```

Représenter le déplacement d'un objet

```
<sxh python; title : 03_tkinter_simple_move.py> #!/usr/bin/python # -*- coding: utf-8 -*-
```

```
from Tkinter import * import time
```

```
window = Tk() sizex=400 sizey=100 canvas = Canvas(window, width = sizex, height = sizey)
canvas.pack() x = 100 # initial left-most edge of first ball y = 30 # initial top-most edge of first ball
r=20 # ball diameter depx=2 # displacement at each move in x direction depy=0 # displacement at
each move in y direction
```

```
ball=canvas.create_oval(x,y,x+r,y+r,fill="blue")
```

```
#moves no_moves=10 for j in range(no_moves):
```

```
    canvas.move(ball, depx, depy)
    canvas.after(10)          # time delay in milliseconds
    canvas.update()
```

```
time.sleep(5) # on attend quelques secondes window.destroy()
```

```
</sxh>
```

Représenter le déplacement de nombreux points

```
<sxh python; title : 04_tkinter_many_moves.py> #!/usr/bin/python # -*- coding: utf-8 -*-
```

```
from Tkinter import * import time
```

```
window = Tk() sizex=400 sizey=600 canvas = Canvas(window, width = sizex, height = sizey)
canvas.pack() x = 100 # initial left-most edge of first ball y = 30 # initial top-most edge of first ball
r=20 # ball diameter depx=2 # displacement at each move in x direction depy=0 # displacement at
each move in y direction
```

```
# create balls: no_particles= 20 dy = (sizey-2.)/(no_particles+1) # y initial separation between balls
print dy ball_list=[] for i in range(no_particles):
```

```
    ball=canvas.create_oval(x,y,x+r,y+r,fill="blue")
    y = y+dy
    ball_list.append(ball)
```

```
#moves no_moves=100 for j in range(no_moves):
