

# Simulations numériques de marches aléatoires : programmes en Python

Pour une bonne compréhension, ces programmes doivent être étudiés successivement. Il est important d'exécuter le code Python et même de tester des petites modifications.

## Génération de nombres aléatoires

### 01\_random.py

```
#!/usr/bin/python
# -*- coding: utf-8 -*-
"""
cf. documentation cf http://docs.python.org/library/random.html
random number generation - génération de nombres aléatoires
functions of interest : choice, randint, seed
"""

from random import *

facepiece = ['pile', 'face']
valeurpiece = [0.01, 0.02, 0.05, 0.1, 0.2, 0.5, 1., 2.]

for i in range(1):
    # choice : random choice of an element from a list
    print(choice(facepiece), choice(valeurpiece))
    # randint : return a random integer number between 2 values
    (including limits)
    print(randint(0,10)) # imprime un nombre aléatoire entre 0 et
10
    print(choice(range(0,11,1))) # same function, using choice and
range to create the list

# seed(ANY_DATA) : seeding of the random number generator with any
(constant) data
# in order to generate reproducible random sequences.
# seed() - without data - uses internal clock value to "randomly"
initiate the generator !

for j in range(3):
    #seed('ma chaîne personnelle') # reproducible initialization
    seed() # to randomly initiate the generator
```

```
for i in range(10):
    print(randint(1000,9999))
print(" ")
```

## Histogrammes de nombres aléatoires

02\_random\_histogram.py

```
#!/usr/bin/env python
# -*- coding: utf-8 -*-

from random import *      # cf. documentation cf
http://docs.python.org/library/random.html
import numpy as np
import matplotlib.pyplot as plt      #
http://matplotlib.sourceforge.net/api/pyplot_api.html#module-matplotlib
.pyplot
import matplotlib.mlab as mlab      #
http://matplotlib.sourceforge.net/api/mlab_api.html#module-matplotlib.m
lab

#seed('ma chaîne personnelle') # reproducible initialization
seed()

rval = []
for j in range(100000):
    rval.append(randint(0,99)) # append to the list a random
(integer) number between 0 and 99

# print rval # uncomment just to see the list of random numbers

# analysis - histogram - see
http://matplotlib.sourceforge.net/examples/api/histogram_demo.html
# http://fr.wikipedia.org/wiki/Histogramme
xh = np.array(rval) # see http://www.scipy.org/Cookbook/BuildingArrays
transforme une liste en un tableau numérique de Numpy
# print(xh)

fig = plt.figure()
ax = fig.add_subplot(111)

n, bins, patches = ax.hist(xh, 50, facecolor='green', alpha=0.75)
print(n) # les nombres d'occurences par classe
print(bins) # les classes, de largeur identique

# modifier le nombre de nombres générés, les nombres de classes-bins,
```

```
plt.show()
```

## Représenter le déplacement d'un objet

[03\\_tkinter\\_simple\\_move.py](#)

```
#!/usr/bin/python
# -*- coding: utf-8 -*-

from tkinter import *
import time

window = Tk()
size_x = 400
size_y = 200
canvas = Canvas(window, width = size_x, height = size_y)
canvas.pack()
