

Eigenvalues and eigenvectors

- Eigenvalues and eigenvectors
- Important matrix properties
 - Hermitian, orthogonality,...
- Eigenvalue algorithm
 - Power iteration, a simple numerical algorithm producing a number λ , the greatest (in absolute value) eigenvalue of a matrix A , and the corresponding eigenvector v , such that $Av = \lambda v$.
 - LR algorithm, developed by Heinz Rutishauser (1958 ?)
 - QR algorithm

Applications

- collisional relaxation
- population dynamics, evolution (stationary population pyramid)
- normal modes analysis (molecular vibrations)
- PCA (principal component analysis)
- Schrödinger equation in quantum mechanics, molecular orbitals (Hartree-Fock theory)

Python libraries

- NumPy (more portability)
 - [numpy.linalg](#)
 - [linalg.eig\(a\)](#) Compute the eigenvalues and right eigenvectors of a square array
- SciPy (more complete wrapper on LAPACK fortran package)
 - [scipy.linalg](#)
 - [scipy.linalg.eig](#) Solve an ordinary or generalized eigenvalue problem of a square matrix
 - [Decompositions](#) (LU, QR,...)
