

System of linear equations

Numerical methods used to solve such problem allow to introduce and experiment on [Time_complexity](#), considering cubic time behavior of standard algorithms and *i.e.* quadratic time solutions using LU decomposition.

- [System_of_linear_equations](#)
- [Gaussian_elimination](#), Gauss and Gauss-Jordan eliminations (diagonalization, triangularization)
- [Pivot_element](#), pivoting
- [LU_decomposition](#)
 - [Triangular_matrix#Forward_and_back_substitution](#)
- Time complexity analysis
 - Hint : in Python, use the timeit module
