

# Questions et réponses en chimie sur chemistry.stackexchange

[Chemistry Stack Exchange](#) est un site de questions et réponses pour les scientifiques, les enseignants, les étudiants,... Il est gratuit, son contenu est sous licence libre (copyleft) [Creative Commons BY-SA](#). Aucune inscription n'est requise pour la consultation. Vous devez vous identifier pour y contribuer. Le fonctionnement est réglé par un système de [points de réputation](#), donnant de plus en plus de droits.

Le site est une des nombreuses déclinaisons proposées par [Stack Exchange](#), un système multi-domaine de questions et réponses né d'un site initial dédié à l'informatique : [Stack Overflow](#). Il existe d'[autres sous-sites](#) pour de nombreuses disciplines : [mathématiques](#), [physique](#), [biologie](#),...

Le niveau de qualité des questions et réponses est mis en évidence, le contenu est trié suivant un ordre de notation, et le niveau général augmente constamment. Certaines interventions restent cependant de faible qualité, mais ne sont pas présentées en priorité.

Des questions sont simplement intéressantes pour leur aspect scientifique. Quelques unes émanent d'élèves ou étudiants en recherche d'explications qui peuvent apparaître éventuellement triviales. C'est alors la démarche, la formulation, et parfois les réponses de moindre qualité qui sont intéressantes, dans le cadre d'une formation en enseignement de la chimie.

- Oxidation of aluminum and manufacturing of electrolytic capacitors
- Why is entropy favorable?
- How is aqua regia stored?
- Why exactly does precipitation occur?
- What is the melting point of diamond?
- Why do we use  $J(J+1)$  instead of  $J^2$  in the rigid body rotor energy equation?
- Le Chatelier's principle: Are there any exceptions?
- What is the difference between a coefficient and a subscript in a chemical equation?
- How do I calculate the degree of dissociation in equilibrium?
- Which is the most acidic hydrogen in vitamin C
- What is the carbon dioxide content of a soda can or bottle?
- Why do different substances have different boiling points?
- Why copper sulphate is a catalyst in this reaction
- Enrichment of  $\text{D}_2\text{O}$
- Why do we use helium in balloons?
- Positive or Negative Anode/Cathode in Electrolytic/Galvanic Cell
- What makes Coke acidic?
- Why do the melting and boiling points of the noble gases increase when the atomic number increases?
- Preparation of iodine solution
- What is the difference between  $\psi$ ,  $|\psi|^2$ , radial probability, and radial distribution of electrons?
- Minimal basis for Li
- Volume of orbitals
- Why are metal oxides basic and non-metals' acidic or neutral

- What would be the effect of the addition of an inert gas to a reaction at equilibrium?
- Are metallic/ionic bonds weaker than covalent bonds?
- Which is the strongest base?
- Derivation of the Temperature Dependence of the Boltzmann Distribution
- How to find the hybridization of an atom in a molecule?
- What are the differences between diesel and unleaded gasoline?
- How to calculate the concentration  $H_3O^+$  in a solution with  $pH=6.99$ ?
- Why do we use helium in balloons?
- Why does potassium react more violently with water than lithium?
- What role does sulfuric acid play in the titration of oxalic acid and potassium permanganate?
- How do I extract cyanide from apple seeds?
- Why are there multiple lines in the hydrogen line spectrum?
- What is SPDF configuration?
- Why do we not generally have “enneane”?
- Which has stronger hydrogen bonds: water or ice?
- Why does adding salt to boiling water cause it to flare up suddenly?
- What bond exists in “red oxygen”, and can something similar happen with hydrogen?
- Why DNA is negatively charged and what makes it so?
- Melting points and boiling points of primary alcohols do not follow the same trend
- Differences between phenols and alcohols
- Why does carbon monoxide have a greater affinity for hemoglobin than oxygen?
- Why doesn't water burn?
- Half-Life of Radioactive Isotopes: Why? How?
- Would it be possible to destroy gold?
- are half of “H2SO4 pH sample problem” webpages just wrong, or am I wrong?
- How to name binary (inorganic) compounds given their chemical formula, and vice-versa?
- Why does  $C=O$  have a larger dipole moment than  $C-O$ ?
- Why do most carboxylic acids have high  $pK_a$  (~5) in spite of having a conjugate base ion that is stabilized by resonance?
- Search by CAS Registry name to obtain trackable accession: ie InChi?
- Calculate pH of a weak acid and weak base neutralization reaction
- What is the proof of complete ionic dissociation in water?
- What causes the “rotting fish smell”?
- Which chemical reactions don't involve bond breaking?
- What is a neutral atom?
- Difference between conformational, constitutional, and structural isomers and the same and different molecules
- Lewis structure for magnesium diboride
- Rules of naming ionic compounds
- Chemical equation that can be balanced in infinite number of ways?
- Would standing next to a pool of mercury do you any harm?
- Why does the melting point get lower going down the Alkali Metal Group with increase in atomic number?
- How can melting point equal freezing point?
- Difference between thermodynamic and kinetic stability
- What is the correct name of 3-isopropyl-4-methylhexane?
- How does chlorine in water evaporate?
- How to decide acidic or basic nature of oxides
- Why is it  $OH^-$  and not  $HO^-$ ? (duplicate)
  - Why is methane's molecular formula conventionally “ $CH_4$ ”, while water is “ $H_2O$ ” (among

others)?

- How is the light from a fire emitted?
- What is the strongest oxidising agent?
- Why don't we explode after drinking water?
- How to chose wavelength in spectrophotometry? How to use Beer-Lambert Law?
- Reason for the stronger acidic property of phenol than alcohol
- Why does wood burn but not sugar?
- How can the solid state structure of cyclopentadienyllithium be explained?
- Why do we use  $\Delta$  to mean heating?
- Is there an easy way to remember charges on ions?
- How to find pH by mixing two solutions of different concentrations?
